

A SINGLE IDENTITY SECURITY SOLUTION IN A COMPLICATED WORLD

Authentication and trust for every person,
device, and machine in your organization.

axiad

Business is changing. Identity security solutions are too.

To conduct business in a cloud-based ecosystem, you need more than just passwords. You need strong, multi-factor authentication to ensure that each person and device connected to your business can be verified. For some, additional layers of security assurance are required to meet compliance standards essential for conducting business. To fully protect your organization, you need a single solution to meet all of your identity security needs.

Identity security doesn't have to be complicated

Axiad provides more than just traditional MFA, giving you peace of mind without burdening your team, and providing you the freedom to focus on your core mission. With authentication for every person, device, and machine in your organization, Axiad's suite of products connects your business so that you can interact, meet stringent compliance requirements, and access information with trust.

One strategic partner for a secure, cost-effective, and comprehensive identity security.

Comprehensive authentication platform

Axiad Cloud provides peace of mind by removing password vulnerabilities and verifying the identities of the users, machines, and applications of your entire digital ecosystem.

Simple to deploy & manage

Security doesn't have to get in the way of efficiency. Axiad meets the needs and constraints of your IT department with a platform that is up in minutes and easy to adopt.

Secure extension of your corporate network

Axiad Cloud is deployed as a virtual private cloud, which eliminates the risk of sharing data or keys with other organizations, while still leveraging your existing cybersecurity infrastructure.

Leverage your IAM investments

Improve security and access by adding comprehensive authentication methods and PKI to your existing access management infrastructure (Ping Identity, Okta, Atos (Evidian), Microsoft, etc.).

Empowering
you to
**take the
journey,
today!**

At Axiaad, our partnership with you doesn't end at product delivery, it just begins. We'll empower you to achieve passwordless authentication, so that you're free to do business, communicate, and create value.

Every journey is unique. That's why we believe it's crucial to understand your pain points and roadblocks to help drive user adoption and achieve rapid, complete deployment. We understand that success will look different to you in the future, which is why Axiaad designs products that meet your security needs of today and tomorrow. No matter what your journey looks like, we've got you.

Operate with trust in the digital world

Axiad delivers an agile, user-centric identity platform that is trusted across leading enterprise, government, healthcare, and financial organizations.

Axiad platform

A full-featured and agile identity solution:

- Addresses a broad spectrum of authentication and secure interactions
- Meets stringent compliance requirements
- Leverages customer's security and IAM investments
- Innovative features to make users self-sufficient and ensure controlled deployments

Knowledge hub

Providing users the knowledge they need to be successful and engaged:

- Improve our customers' security posture
- Reduce their Total Cost of Ownership
- Online training, tutorials, and tools

Expert services

Providing the expertise to customers who need to:

- Plan and ensure a smooth deployment
- Address more challenging technical objectives
- Formalize current and future needs

Some of the ways our customers use Axiad.

Secure remote working for everyone, everywhere

Workforces are increasingly independent of the physical office. But the need to protect corporate resources and communications remains crucial. Axiad's identity security solutions provide a quick and efficient solution for the office and beyond.

Enterprise-wide trust

Organizations need to be able to securely interact with internal and external stakeholders. Axiad enables trusted communications for your entire corporate ecosystem, including employees, partners, suppliers, and customers.

Secure your digital infrastructure

Technology is at the center of modern enterprises that rely on cloud-based solutions to stay connected and agile. Axiad provides authentication throughout your entire digital environment, with trusted identities for all of your enterprise's assets.

CASE STUDY:

DELIVERING A DEDICATED ENTERPRISE-READY PKI

PKI is known to be challenging to implement, but it's necessary and can be very manageable with the right approach. For this customer, we delivered a dedicated, enterprise-ready PKI through Axiad Cloud. Here's a quick overview of why our approach changed this organization's experience of PKI.

PROBLEM

- The company became noncompliant after losing IT resources who managed an on-premise solution
- An enterprise-ready PKI solution was needed to safely operate
- Certificates were needed for domain controllers based in different location

SOLUTION

- We deployed dedicated root and issuing certificate authority via Axiad's virtual private cloud
- Replaced multiple in-house PKI deployments
- Issued certificates available for all machines, servers, and devices

END RESULT

This organization achieved technical and compliance objectives, reduced costs, and freed their IT team to focus on other critical tasks.

About Axiad

Axiad delivers an agile, user-centric identity platform that is trusted across leading enterprise, government, healthcare, and financial organizations. Our platform helps leaders manage cybersecurity risks, compliance, and operational efficiency for their workforce, partners, and customers.

Our approach starts with what customers need from a security and business perspective. With Axiad, companies get a single supplier providing an integrated solution without sacrificing security.
